

BULKING CYCLE

Testosterone Enanthate + Dianabol Protocol

CYCLE COMPOUNDS

Testosterone Enanthate

500 mg per week

Dianabol

30 mg daily

MANDATORY REQUIREMENTS

- Liver supporter is compulsory
- Anti estrogen according to your blood report
- PCT is compulsory
- Heavy doses means not heavy results
- Before cycle blood report is compulsory

IMPORTANT NOTES

- Blood work must be completed before starting cycle to establish baseline health markers
- Liver support should be taken throughout the entire cycle duration
- Anti-estrogen dosage and type must be determined based on individual blood test results
- Post-Cycle Therapy (PCT) protocol must be implemented after cycle ends for hormonal recovery
- Results depend on proper nutrition, training consistency, and recovery - not dosage alone
